

Ancestry Library Edition is a huge subscription database, similar to the popular Ancestry.com, which you can use to trace your ancestors. It consists of thousands of smaller databases and it's free to use on our public computers.

Examples of the types of records available include birth, marriage & death records, census records, immigration records, directories, convict records, land records and more.

Ancestry Library Edition is only available on our public computers. To utilise this service just ask our friendly staff for the password to access the website.

Please note you cannot access your own account and therefore your own personal family trees through this portal. You would have to use your own computer with your own subscription to the records, in order to save these records to people in your tree.
